Top Skills

React.js

Angular

Node.js

Certifications

React Certificate

CSS Certificate

Problem Solving Certificate

Frontend Developer (React)

Python Certificate

Honors-Awards

1st Place — Yandex Open Data
Hackathon 2013

4th Place — Telegram International
JavaScript Contest

Andrei Arkhipov

Senior Software Engineer @ Barclays

Prague, Czechia

Summary

Senior Software Engineer with 15+ years of experience building complex web applications and high-performance user interfaces. I specialize in frontend architecture, data-driven systems, and performance optimization. I work primarily with React and Angular, focusing on designing maintainable, scalable solutions used in real production environments. My strength is turning complex requirements into clean technical designs and reliable implementations. I approach problems from a systems perspective — balancing correctness, performance, and delivery speed. I care about architecture quality, long-term maintainability, and practical engineering tradeoffs. Comfortable working in cross-functional teams, improving existing systems, and driving technical decisions where clarity and impact matters.

Experience

Barclays

Senior Software Engineer

April 2023 - Present (3 years 4 months)

Prague, Czechia

Worked on a mission-critical internal financial platform:

- Strengthened security and compliance across authentication and authorization flows (SSO rollout, access control redesign, audit logging, dependency and platform hardening)
- Built and maintained a shared Component Library to standardize UI patterns and accelerate delivery across teams
- Delivered market movement analytics features to support internal decision workflows
- Implemented a statistics and reporting module with interactive charts and reusable visualization components
- Automated application signing to reduce manual steps and improve release reliability

- Rebuilt the “breakdown tree” experience, improving usability and maintainability of a complex hierarchical UI
- Introduced and expanded unit test coverage for critical components and services to improve regression safety and long-term maintainability

Conrad Electronic Group
 Senior Software Engineer
 August 2021 - June 2022 (11 months)
 Prague, Czechia

Refactored and modernized an e-commerce platform frontend:

- Led migration of React codebase from JavaScript to TypeScript, improving type safety and long-term maintainability
- Redesigned and modernized the frontend build pipeline, migrating from Gulp to Webpack and stabilizing build and deployment flows
- Developed custom Webpack plugins to support project-specific build requirements and automation
- Implemented structured user action tracking and logging integrated with GTM for product analytics
- Improved product detail page UX and rendering behavior, simplifying complex UI logic
- Enhanced responsive and print layouts to ensure consistent behavior across devices and output formats

Luxoft
 Lead Software Engineer
 August 2019 - March 2021 (1 year 8 months)

Team Lead on a high-load public services platform project; delivered a new form engine from scratch:

- Designed and implemented client-side architecture for a new form player used in high-load public service workflows
- Led the team through full delivery lifecycle — from architecture design to production rollout
- Established CI pipeline (GitLab) and automated quality gates including linters, unit tests, and static code analysis
- Defined and enforced code review standards to improve code quality and consistency across the team
- Packaged and delivered the solution as a reusable npm module for integration across multiple services
- Drove continuous product improvement through growth-oriented team practices and technical feedback loops

- Conducted regular 1:1 meetings and mentored developers to support technical and professional growth
- Participated in technical interviews and hiring decisions
- Delivered first production-ready version within 3 months from project start

Tutu

Senior Software Engineer

March 2018 - May 2019 (1 year 3 months)

Developed a high-load bus ticket sales SPA (React) for a travel platform serving 6M+ users per month:

- Built and evolved a React single-page application for a high-traffic booking flow in a large travel platform
- Improved load and rendering performance of critical high-load pages by more than 2× through frontend architecture and optimization work
- Refactored a core search form module, eliminating accumulated legacy logic issues and stabilizing a business-critical user flow
- Increased unit test coverage by 2× to improve regression safety and change confidence
- Designed and implemented additional product services supporting booking and search workflows
- Performed regular code reviews and contributed to code quality and engineering standards
- Collaborated closely with UI/UX to refine interaction patterns and usability of key user flows
- Worked within a Scrum delivery model in a cross-functional product team

CUSTIS

Lead Software Engineer

November 2016 - March 2018 (1 year 5 months)

Led a 10-engineer frontend team on a large-scale education platform:

- Led frontend delivery and technical direction for a team of 10 engineers across multiple product streams
- Established knowledge-sharing and documentation practices to reduce onboarding time and improve team autonomy
- Introduced structured code review standards to raise overall code quality and consistency
- Conducted regular 1:1 meetings and supported developer growth and performance
- Participated in technical hiring and candidate evaluation

- Introduced GitLab Flow workflow, significantly reducing branch management complexity and rebase-related issues
- Standardized code quality practices by introducing linting rules and automated style checks
- Contributed to the design and implementation of a shared UI kit used across the platform
- Contributed to a complex authentication and access flow implementation

Rutube

Senior Software Engineer

November 2013 - November 2016 (3 years 1 month)

Contributed to multiple large-scale media and streaming platforms:

- Delivered frontend functionality for major media and video platforms including Rutube and NTV Plus services
- Contributed to the development of a secure online voting system for a national media award platform
- Built frontend components for live broadcast and streaming-related services
- Implemented the UI layer of an online video editor enabling real-time highlight clipping from live broadcasts (Angular, D3.js)
- Developed a single-page content management system for media workflows using Angular

BARS GROUP

Software Engineer

March 2012 - October 2013 (1 year 8 months)

Delivered frontend functionality for several public sector digital platforms, including cultural heritage monitoring, accessibility initiatives, and education-focused social services.

Freelance (Self employed)

Web Developer

October 2007 - March 2012 (4 years 6 months)

Delivered freelance web projects using WordPress, Joomla, NetCat, and Bitrix.
